Git

Eclipse

Maven

GitHub

PROJECTS

1.Product Catalog (Spring Boot + React)

- Developed a full-stack e-commerce platform with category-wise product listings, user authentication, and role-based access (Admin/User).
- Integrated cart and order system with quantity management, checkout flow, and order history tracking.
- Enabled image support for products using optional image URLs stored in the database, displayed across product cards and order history.
- Secured backend with JWT authentication and Spring Security; implemented RESTful APIs for user, product, and order management.

2.Commercial Website [🔗](#)

- Created commercial website for a hotel . It includes all the pages showing description of hotel .
- User can also see the location of hotel on map for easy navigation.
- Google analytics is used for measuring the real time traffic on the website.

3.Workwise(Local Service Marketplace)

- Developed a freelance marketplace platform connecting users with local service providers.
- Created a user dashboard for booking history, service tracking, and payments.
